Stains are localized dirt that effect the fabric fibers just like coloring agents.

The methods for cleaning stains are as varied as the nature of stains themselves. It's important to identify the stain type correctly and take care to apply the right cleaning method, also keeping in mind the fabric type. Our cleaning suggestions below will assist you in removing various stains from settling on your product. General Suggestions for Cleaning

- Take care to treat stains immediately. Most stains will come out easily regardless of their size or type if treated correctly and before drying. Heat, light and contact with air helps stains settle and makes it more difficult to remove. Even stubborn stains are more likely to be removed if treated right away.
- In case of any spills from stain causing agents such as water, tea, food, etc, apply cleaning treatment immediately. Clean up liquid elements by using an absorbant cloth or a paper towel. As for solid elements, remove without damaging the fabric. Take care to treat stubborn stains by applying the suggestions in "Cleaning Suggestions According to the Fabric Type" section.
- Test all mixtures to be used in cleaning on an out of sight part of the fabric. Apply the mixture to thr fabric and then press a white towel on it. After waiting for about 20 minutes, if the color of the fabric doesn't come through onto the white towel and there are nopeeling problems, colorfastness, then you may use that mixture safely. Otherwise, do not use this mixture. Some fabrics are sensitive because of their own special design, so their cleaning should be done with greater care and gentleness. The test you do on the out of sight area will give you an idea as to how to treat the stain.
- Take care that you clean dust on your product immediately. Any liquid (even clean water) that spills onto your fabric can cause dust to form stains. Clean the would-be stains in accordance with the suggestions cited in the "Cleaning Suggestions According to the Fabric Type" section.
- Take care not to use hard or sharp objects or chemical elements or any bleach agents for cleaning.
- Do no't treat fabric by getting it wet, applying pressure or by brushing.
- Do not use carpet cleaning machine for stain removal.
- Do not use iron for drying process and be careful not to leave the product under sun light.
- If there is no label or sign on the product that permits dry cleaning, do not apply dry cleaning products under any circumstances.

If dry cleaning is advisable for the product, make sure that it is applied correctly. Improper application of dry cleaning can result in damage to the fabric. If there are no labels or signs on the product to indicate it is washable, do not wash it. For washable fabrics make sure that you abide by the instructions. Below is the cleaning methods suggested according to your product's fabric type. You can learn the fabric type of your product from the retailer you bought it at or through our technical service and call centers.

Attention: there may be certain special cleaning and usage suggestions specific to your product. If you are already provided with special instructions pertaining to your product in the form of a label, brochure etc., please apply these special suggestions first

(these labels may be on the package of the product as well).

Attention: For some products, the same fabric may have different properties depending on area or there may be more than one type of fabric type in different parts of the product. Please clean each area according to its specific properties.

The instructions given here are intended only as a suggestion. They may not give the same results on all fabric types and stains.

Please consult an expert cleaning company for the stains you cannot clean on your own.

Cleaning Suggestions according to Fabric Type

Attention: After applying cleaning methods as specified below, there may be stains left around the cleaned area. An extensive cleaning of the product may prevent such instances of residual staining.
